

1 I claim:

2 1. A stilt assembly comprising:

3 a base assembly with a floor engaging surface on a  
4 first side and a first puzzle registry on a  
5 second, opposite side;

6 a middle assembly having a second puzzle registry  
7 on a first middle assembly terminal end, and  
8 a third puzzle registry on a second middle  
9 assembly terminal end, said second puzzle  
10 registry being configured for reversible  
11 engagement with said first puzzle registry of  
12 said base assembly;

13 a foot support assembly having a fourth puzzle  
14 registry on a first foot support assembly  
15 terminal end, and a foot engagement assembly  
16 supported at a second foot support assembly  
17 terminal end, said fourth puzzle registry  
18 being configured for reversible engagement  
19 with said first puzzle registry and said  
20 third puzzle registry alternatively.

1           2.    The stilt assembly of Claim 1 wherein said foot  
2               support assembly further comprises a foam spacer  
3               block member situated between said first foot  
4               support assembly terminal end and said second foot  
5               support assembly terminal end.

6  
7           3.    The stilt assembly of Claim 1 wherein said middle  
8               assembly further comprises a foam spacer block  
9               member situated between said first middle assembly  
10              terminal end and said second middle assembly  
11              terminal end.
